

Rhyzen Car Booking and Management System

Project Overview

Rhyzen Car booking and Management System is a modern full-stack smart garage and vehicle service management platform designed to streamline automotive service operations, customer bookings, vehicle monitoring, and business management.

The system was built to provide an efficient and user-friendly experience for both customers and garage administrators. It combines real-time booking workflows, service management tools, vehicle tracking concepts, and modern dashboard analytics into a professional web-based solution.

Project Type

- Full-Stack Web Application
- Smart Garage Management Platform
- Vehicle Booking & Service System

Core Features

Customer Booking System

- Online vehicle service booking
- Real-time appointment scheduling
- Service selection and booking management
- Customer booking history tracking
- Appointment status updates

Smart Garage Dashboard

- Modern admin dashboard interface
- Real-time business overview
- Service monitoring system
- Booking analytics and statistics
- Staff and workflow management

Vehicle Service Management

- Vehicle records management
- Maintenance tracking
- Service history monitoring
- Repair progress updates
- Automated status handling

GPS Vehicle Tracking Integration

- Real-time vehicle tracking concept
- Live monitoring interface
- Vehicle location management
- Smart tracking dashboard visualization

Authentication & Security

- Secure login and registration system
- Role-based authentication
- Protected admin access
- Secure database management

Customer Booking System

- Online vehicle rental booking
- Real-time appointment scheduling
- Dynamic vehicle reservation interface
- Customer booking history tracking
- Appointment and reservation status updates
- Interactive booking confirmation workflow
- Booking code generation system
- Customer dashboard monitoring
- Automated rental management process
- Date-based reservation system
- Real-time vehicle availability system

E-Wallet Payment Integration

- Integrated PayMongo payment gateway
- GCash payment support
- Secure online payment processing
- Real-time payment verification
- E-wallet checkout interface
- Automated payment confirmation system
- Payment transaction recording
- Digital receipt generation
- Successful payment validation workflow
- Online billing and invoice handling

Email Receipt & Notifications

- Automated email receipt generation
- Booking confirmation email support
- Payment receipt notifications
- Reservation details summary
- Digital invoice delivery
- Customer booking notification system

Vehicle Showcase Interface

- Premium vehicle listing system
- Dynamic vehicle catalog display
- Car detail viewing page
- Vehicle image gallery management
- Vehicle specification display
- Responsive car showcase UI
- Modern booking interface design
- Vehicle pricing and availability display

Admin Media Management

- Vehicle image upload system
- Car media management dashboard
- Main image selection feature
- Vehicle feature customization
- Interior detail management
- Real-time media updates
- Admin vehicle content control

Booking History & Dashboard

- User rental dashboard
- Booking history tracking system
- Active rentals monitoring
- Expired booking management
- Payment status tracking
- Total spending analytics
- Rental activity overview
- Booking code management
- Customer transaction records

Financial Reports & Revenue Analytics

- Financial reporting dashboard
- Revenue monitoring system
- Monthly revenue analytics
- Expense tracking visualization
- Deduction monitoring system
- Date-based financial filtering
- Revenue summary charts and graphs

- Business performance analytics
- Transaction reporting tools
- Rental income tracking
- Financial overview dashboard
- Real-time revenue statistics
- Admin financial management panel

Booking Search & Tracking System

- Booking code search functionality
- Real-time booking lookup system
- Reservation tracking interface
- Customer booking verification
- Searchable booking database
- Fast reservation retrieval system
- Booking status checker
- Admin booking search panel
- Booking code validation system
- Rental transaction tracking

Technologies Used

Frontend

- HTML5
- CSS3
- JavaScript
- Responsive UI Design

- Animation Effects

Backend

- ASP.NET Core
- C#
- RESTful Architecture

Database

- Microsoft SQL Server
- Entity Framework Core

Deployment & Cloud

- Cloud Database Integration
 - Production Deployment Ready
 - Full-Stack Hosting Architecture
-

Key Highlights

- Built using enterprise-level full-stack technologies
 - Designed with scalable architecture principles
 - Focused on real-world business workflow automation
 - Modern UI/UX inspired by professional automotive systems
 - Database-driven management platform
 - Portfolio-ready production style project
-

Development Goals

The main goal of the project was to create a smart and modern Car booking management ecosystem capable of improving service efficiency, customer experience, and operational workflow.

This system demonstrates:

- Full-stack development skills
- Database management
- Backend API handling
- Authentication implementation

- Responsive frontend development
 - Real-world business logic integration
 - Dashboard and admin system design
-

Future Improvements

- AI-powered maintenance recommendations
 - SMS/Email notification integration
 - Advanced GPS live tracking
 - Payment gateway integration
 - Mobile application version
 - Real-time technician assignment system
-

Portfolio Description (Short Version)

Rhyzen Car booking and Management System is a full-stack smart automotive service platform developed using ASP.NET Core, C#, and Microsoft SQL Server. The system features online booking management, vehicle service tracking, admin dashboard analytics, authentication, and responsive modern UI/UX designed for real-world garage operations.

Portfolio Description (Professional Version)

Developed a modern full-stack smart garage management system designed to optimize automotive service operations and customer management workflows. The platform includes appointment booking, vehicle service tracking, dashboard analytics, authentication systems, and responsive UI/UX. Built using ASP.NET Core, C#, Entity Framework Core, and Microsoft SQL Server with scalable architecture and production-ready structure.
